Vidit Dhull, Data Engineer

vidit.dh@gmail.com | Portfolio: viditdhull.github.io | +91 9355512200 | LinkedIn: linkedin/viditdhull/ | Bengaluru, India

PROFESSIONAL SUMMARY

- **Data Engineer** with **3+ years experience in designing scalable lakehouse and event-driven data platforms** for real-time telemetry analytics and enterprise reporting.
- **Strong ownership mindset** with hands-on **leadership in platform architecture**, performance optimization, code reviews, and reusable engineering standards.
- **Ranked 1st among 120+ students** in PG - Diploma (Big Data Analytics) at **CDAC Bengaluru.**
- HackerRank 5 star in **Python and SQL**; Solved **700+ LeetCode problems** with hands-on CI/CD, and agile collaborations.

EXPERIENCE

Data Engineer, Alstom — March 2023 - Present

- Worked on development of company wide, multi product log analytics platform (**Dialogs**) for train telemetry subsystems (CCP2, MooN) built from POC to production on a **Medallion lakehouse**; unified heterogeneous logs for KPIs, log browsing, and pattern matching. (Processes **millions of events** and **TB scale** data daily)
- **Owned end-to-end** delivery of an **auto-trigger, machine-to-machine ingestion** framework in **Microsoft Fabric** (Blob → Event stream/hub → Lakehouse), supporting 1..N file drops and separating UI vs automated uploads; improved ingestion responsiveness and reduced ops overhead.
- **Led architecture + implementation** of **signature/pattern search** on telemetry using **PySpark**, enabling fast matching of event sequences to known signatures; reduced investigation/triage time by **50%** for recurring issues.
- Designed and delivered **partial-run handling** (late/partial/complete arrivals) with **idempotent merges** + governance rules, cutting data inconsistencies and manual rework by **60%** and improving KPI reliability.
- **Built standardized Medallion** (Bronze/Silver/Gold) **Delta pipelines** + **semantic models** for multi-tenant onboarding; reduced onboarding/troubleshooting cycle from **2 months to <2 weeks**.
- Improved **performance and cost-efficiency** by optimizing **Spark workloads** (partitioning, broadcast joins, shuffle reduction) and table layout (partitioning/indexing); cut runtime by **50%** and improved query latency by **90%**.
- **Technical owner** for CCP2 stream, driving architectural decisions, aligning engineering priorities with product requirements, and mentoring contributors on platform standards.
- Authored automated validation checklists; reduced onboarding defects to under **10%** and reducing manual rework by **60%.**

SKILLS

- **Programming Languages:** Python, SQL, PySpark
- **Tech Stack:** Apache Spark, Apache Airflow, Kafka, Batch and Real-time processing, Power BI
- **Architecture:** Medallion/Lakehouse Architecture, Star Schema, ELT/ETL, Indexing/Partition strategy, Dimensional Modeling
- **Cloud & Data Platforms:** Microsoft Fabric (Lakehouse, Eventhouse/KQL), ADLS Gen2, Azure Data Factory (ADF), Azure Synapse, Azure Functions, Databricks, OneLake/Delta Lake concepts, Azure Storage/Blob, Events stream
- **Data Quality & Governance:** Validation Automation, Logging Frameworks, KPI Modeling, RBAC, Access Control
- **Collaboration & Version Control:** GitLab, Agile/Scrum, Azure Devops, Code Reviews, Stakeholder Collaboration
- **Additional Skills:** Requirement Analysis, FinOps Awareness, Parquet/Tabular Data Formats, Partitioning, Indexing

CERTIFICATIONS

- **DP-700:** Fabric Data Engineer Associate (**Microsoft**), September 2025
- **DP-203:** Azure Data Engineer Associate (**Microsoft**), June 2024
- **DP-900:** Azure Data Fundamentals (**Microsoft**), April 2024
- **IBM:** Data Engineering Specialization, October 2023

EDUCATION

- **PG-Diploma, Big Data Analytics (Ranked 1st)** - CDAC Bengaluru — **Sept 2022 - March 2023**
- **B. Tech in Computer Science** - UIET-MDU, Haryana — **July 2018 - July 2022**
